

Mirko Cvetanoski

Full Stack Web Developer

Began my journey into software development in 2021, initially diving into backend development with Django. Over time, I transitioned to full-stack development, and my current primary stack is **Next.js** and **MongoDB**.

I'm passionate about building intuitive, performant web applications and continually expanding my knowledge across different technologies. I also have a growing interest in **low-code/no-code development**, seeing its potential to rapidly prototype and solve problems.

Always eager to learn, collaborate, and explore new stacks and paradigms in tech.

Microsoft SharePoint

PERSONAL PROJECTS

SportsHub – Live Sports Score Platform
(03/2025 – Present)

- Stack:** Nextjs, Chakra UI, MongoDB, NextAuth.
- Description:** Developed a real-time sports results platform inspired by Flashscore, enabling users to track live scores, match schedules, and results across multiple sports. Integrated full CRUD functionality for managing fixtures and team data, with secure user authentication handled via NextAuth. Designed a responsive, mobile-first UI using Chakra UI, and optimized data flow with efficient fetching and rendering. MongoDB was used for scalable data storage, ensuring performance and reliability in real-time updates.

Property Plus – Apartment & Condo Listing Platform
(08/2024 – 10/2024)

- Stack:** Nextjs, Tailwind, MongoDB, NextAuth, Cloudinary
- Description:** Developed a full-stack web application for discovering and managing apartment and condo listings. Integrated full CRUD functionality for property management with secure authentication via NextAuth. Users can browse, create, edit, and delete listings, each with optimized image uploads handled through Cloudinary. Built with Tailwind CSS for a responsive, modern UI and MongoDB for scalable data handling.

Document Archive Application – Internal Document Management Tool
(01/2025 – Present)

- Stack:** Microsoft PowerApps, Microsoft Sharepoint
- Description:** Designed and developed an internal archive application for centralized document storage and management. Built with Power Apps and integrated with SharePoint as the backend data source. Implemented functionality to add, update, and view documents through intuitive gallery and form screens, supporting real-time operations. Enhanced team productivity by streamlining document access and reducing manual tracking.

Dexmat Website Section – Custom Web Component
(11/2023 – 02/2024)

- Stack:** jQuery, HTML, CSS
- Description:** Developed a dynamic and responsive website section for Dexmat using jQuery and plain CSS. Focused on clean, maintainable code and smooth UI interactions to enhance user experience. Implemented custom animations and DOM manipulation for interactive elements, ensuring seamless integration with the existing site structure.
